

HEXAGONAL FLASHER TOP

Chris Palmer
USA

PAPER INFO: A 14-inch (35 ½ cm) square of elephant hide was used to make this action model. You must first cut the paper into a hexagon.

TIPS AND TRICKS: After you fold the flasher, put a tight rubber band around the collapsed model and submerge it in water until thoroughly soaked. Allow to air dry completely with the rubber band on. When your model is dry, take off the rubber band and put it point side down on a firm surface. Pull two opposite flaps and watch it spin! Check out the bonus section of Issue 2 for a video demonstration. You can also find a printable pdf of the CP.
